

CLEARPASS A-EYE® PLATFORM

AI-Driven People Screening
for Modern Corrections

CLEARPASS A-EYE is not just a scanner — it's an intelligent platform designed to stop contraband others miss. Powered by real-time AI and trained on thousands of prison-specific scans, the system identifies threats deep inside the body, not just under clothing.

It processes raw X-ray data before the image even appears, highlights risk areas, and visually marks threats by type — drugs, phones, foil-wrapped items, sharp objects, and more. The result: faster inspections, fewer errors, and stronger outcomes at every checkpoint.

With every scan, the platform gets smarter. This isn't just an upgrade — it's a new class of screening technology, proven across over 500 correctional facilities and built to adapt to your evolving needs.

When you choose CLEARPASS, you're not just buying equipment — you're investing in a living, learning security technology that evolves with your facility.

PRISON PROVEN®

How A-EYE® Powers the CLEARPASS Advantage

- Cuts through anatomical noise to reach what's hidden deep inside
- Detects contraband concealed in the body — not just under clothing
- Speeds up inspections and shortens decision time
- Reduces false positives and minimizes re-scans
- Drives the platform — not as a feature, but as its foundation.

ASSEMBLED IN USA

How does it help us detect more contraband?

CLEARPASS A-EYE® Platform detects threats others miss — including items swallowed or inserted inside the body. AI works with raw X-ray data to find and highlight those objects instantly, with clear markers and classification.

What's different from other scanners?

It's not just a scanner — it's a fully AI-integrated platform. While others require constant interpretation, CLEARPASS Platform delivers visualized, classified threats up front — faster, clearer, and with more accuracy.

Will it work with our current staffing and layout?

Yes. CLEARPASS is simple to deploy and consistent across all environments. It requires minimal training and reduces human variability — lowering the risk of errors, omissions, or subjective interpretation.

Will this system become outdated in a few years?

No. That's the value of the CLEARPASS A-EYE® Platform. Unlike traditional equipment, it evolves through ongoing software updates, learning from real-world scans and improving its detection patterns over time — without hardware replacement.

Is it proven in real facilities?

Yes. Over 500 U.S. correctional facilities use CLEARPASS A-EYE® Platform today. In the UK, deployment across 75 prisons led to 46,900+ contraband finds, a 16% drop in violence, and 50% fewer drug positives. This is PrisonProven™ in action.

CLEARPASS A-EYE® Platform isn't a one-time solution — it's an adaptive AI environment. It scales with your facility, adjusts to policy changes, and learns from every scan to improve threat recognition in real correctional conditions — where contraband is often swallowed or internally concealed.

Powered by the embedded A-EYE® engine, the platform continuously refines its detection logic using real operational feedback, reducing human inconsistency and keeping performance strong even with staff turnover.

SECURE MORE. SCAN LESS. DECIDE FASTER.
